Project Setup & Configuration {#project-setup}

Step 1: Initial Flutter Project Setup

AI Prompt for Project Creation:

Create a Flutter project structure for Grow360 employee performance management system with the following requirements:

PACKAGES NEEDED:

- firebase_core: ^2.24.2
- firebase_auth: ^4.15.3
- cloud_firestore: ^4.13.6
- firebase_storage: ^11.5.6
- flutter_riverpod: ^2.4.9
- go_router: ^12.1.3
- fl_chart: ^0.66.0
- flutter_form_builder: ^9.1.1
- form_builder_validators: ^9.1.0
- intl: ^0.19.0
- cached_network_image: ^3.3.0
- file_picker: ^6.1.1

PROJECT STRUCTURE:

```
lib/  
├── main.dart  
├── firebase_options.dart  
├── core/  
│   ├── constants/  
│   ├── theme/  
│   ├── utils/  
│   └── router/  
├── models/  
├── providers/  
├── services/  
├── screens/  
│   ├── auth/  
│   ├── dashboard/  
│   ├── employees/  
│   ├── goals/  
│   ├── reviews/  
│   └── analytics/  
├── widgets/  
│   ├── common/  
│   ├── charts/  
│   └── forms/
```

Generate complete pubspec.yaml and main.dart with Firebase initialization and responsive MaterialApp setup with Material Design 3.

Step 2: Firebase Configuration

AI Prompt for Firebase Setup:

Set up Firebase configuration for Flutter web and mobile:

1. Create firebase_options.dart with web and mobile configurations
2. Initialize Firebase in main.dart with error handling
3. Set up Firestore settings for web compatibility
4. Configure Firebase Auth for email/password
5. Add Firebase security rules for development
6. Include offline persistence configuration
7. Set up proper error boundaries and loading states

Generate complete code with environment-specific configurations and proper initialization sequence.

Firebase Database Schema {#database-schema}

Firestore Collections Structure

AI Prompt for Database Design:

Design comprehensive Firestore database schema for Grow360 employee performance management:

COLLECTIONS STRUCTURE:

1. USERS Collection:

- uid (document ID)
- email, displayName, photoURL
- role: 'hr' | 'manager' | 'employee'
- departmentId, managerId
- createdAt, updatedAt
- isActive, permissions

2. EMPLOYEES Collection:

- employeeId (document ID)
- personalInfo: name, email, phone, address
- jobInfo: position, department, hireDate, salary
- managerId, skills[], certifications[]
- performanceScore, status
- metadata: createdAt, updatedAt

3. GOALS Collection:

- goalId (document ID)
- employeeId, title, description
- category: 'performance' | 'learning' | 'project'
- priority: 'high' | 'medium' | 'low'
- status: 'pending' | 'in_progress' | 'completed'
- targetDate, completedDate
- progress: number (0-100)
- createdBy, assignedBy

4. REVIEWS Collection:

- reviewId (document ID)
- employeeId, reviewerId, period
- type: 'quarterly' | 'annual' | 'project'
- ratings: {performance: number, communication: number, leadership: number}
- feedback: string, goals: string[]
- status: 'draft' | 'submitted' | 'approved'
- dueDate, submittedAt

5. DEPARTMENTS Collection:

- departmentId, name, description
- managerId, employeeCount
- budget, goals[]

Generate complete Firestore security rules, indexes configuration, and sample data for a software company with 50+ employees across Engineering, HR, Sales, and Marketing departments.

Security Rules

AI Prompt for Security Rules:

Create comprehensive Firestore security rules for role-based access:

ROLE PERMISSIONS:

- HR: Full access to all data
- Manager: Access to their team's data + read-only company data
- Employee: Access to their own data + read-only team data

RULES REQUIREMENTS:

1. Users can only read/write their own profile
2. Managers can access their direct reports' data
3. HR can access all employee data
4. Goals can be created by managers/HR, updated by employees
5. Reviews can be created by managers/HR, self-reviews by employees
6. Department data is read-only for employees
7. Audit trail for all write operations
8. Rate limiting and data validation

Generate complete security rules with proper validation, custom claims integration, and performance optimization.

Authentication Implementation {#authentication}

AI Prompt for Authentication System:

Implement comprehensive Firebase Authentication system for Flutter:

FEATURES NEEDED:

1. Email/password login with validation
2. Role-based navigation after login
3. Custom claims for user roles (hr, manager, employee)
4. Password reset functionality
5. User profile management
6. Authentication state management with Riverpod
7. Auto-logout on token expiry
8. Responsive login UI with proper error handling

SCREENS TO CREATE:

- Login screen with form validation
- Password reset screen
- Profile setup screen for new users
- Role selection for admin users

STATE MANAGEMENT:

- AuthNotifier with Riverpod
- User role provider
- Navigation guards for protected routes
- Loading and error states

Generate complete authentication flow with proper error handling, form validation, and responsive Material Design 3 UI.

Core Features Development {#core-features}

Dashboard Implementation

AI Prompt for Dashboard:

Create comprehensive dashboard for Grow360 with role-based content:

DASHBOARD FEATURES:

1. Key Performance Indicators (KPIs) cards
2. Recent activities timeline
3. Goal progress charts (fl_chart)
4. Team performance overview
5. Upcoming reviews/deadlines
6. Quick action buttons
7. Responsive grid layout

ROLE-SPECIFIC CONTENT:

- HR Dashboard: Company-wide metrics, hiring pipeline, review status
- Manager Dashboard: Team performance, goal tracking, review queue
- Employee Dashboard: Personal goals, upcoming reviews, skill development

CHARTS NEEDED:

- Goal completion rate (bar chart)
- Performance trends (line chart)
- Department comparison (pie chart)
- Skill development radar chart

Generate responsive dashboard with real-time data updates, interactive charts using fl_chart, and Material Design 3 components. Include proper loading states and error handling.

Employee Management

AI Prompt for Employee Management:

Implement complete employee management system:

FEATURES:

1. Employee list with search, filter, and pagination
2. Employee profile view/edit
3. Add new employee form
4. Skills and certifications management
5. Performance history view
6. Goal assignment and tracking
7. Responsive data tables

FORMS NEEDED:

- Employee registration with flutter_form_builder
- Skill assessment form
- Goal assignment form
- Performance review form

UI COMPONENTS:

- Searchable employee cards
- Filterable data tables
- Modal forms for editing
- File upload for profile pictures
- Drag-and-drop goal assignment

Generate complete CRUD operations with form validation, real-time updates, and responsive design. Include proper error handling and confirmation dialogs.

Goal Management System

AI Prompt for Goal Management:

Create comprehensive goal management system:

GOAL FEATURES:

1. Create/assign goals with categories and priorities
2. Track goal progress with visual indicators
3. Set deadlines and reminders
4. Comment system for goal updates
5. Goal templates for common objectives
6. Bulk goal assignment
7. Goal analytics and reporting

GOAL TYPES:

- Performance goals (KPI-based)
- Learning goals (skills/certifications)
- Project goals (deliverable-based)
- Career development goals

UI COMPONENTS:

- Kanban board for goal status
- Progress bars and charts
- Goal timeline view
- Quick action menus
- Drag-and-drop interface

Generate complete goal management with real-time collaboration, progress tracking, and interactive UI using Material Design 3.

Advanced Features {#advanced-features}

Real-time Analytics

AI Prompt for Analytics:

Implement advanced analytics dashboard with real-time data:

ANALYTICS FEATURES:

1. Performance trending analysis
2. Goal completion analytics
3. Department performance comparison
4. Employee engagement metrics
5. Review completion rates
6. Skill gap analysis
7. Predictive performance indicators

CHARTS AND VISUALIZATIONS:

- Interactive line charts for trends
- Heat maps for performance data
- Radar charts for skill analysis
- Sankey diagrams for career progression
- Real-time updating dashboards

FILTERS AND CONTROLS:

- Date range selectors
- Department/team filters
- Performance metric toggles
- Export functionality (PDF/Excel)

Generate comprehensive analytics with `fl_chart`, real-time Firestore listeners, and responsive design. Include data export and sharing capabilities.

Performance Review System

AI Prompt for Review System:

Create complete performance review system:

REVIEW FEATURES:

1. 360-degree feedback system
2. Self-assessment forms
3. Manager review forms
4. Peer review collection
5. Review scheduling and reminders
6. Review analytics and insights
7. Historical review comparison

REVIEW TYPES:

- Quarterly performance reviews
- Annual comprehensive reviews
- Project-based reviews
- Probationary reviews

WORKFLOW:

- Review cycle creation
- Automated notifications
- Review status tracking
- Approval workflows
- Final review generation

Generate complete review system with form builders, workflow management, and comprehensive reporting. Include email notifications and calendar integration.

Deployment & Testing {#deployment}

Firestore Hosting Setup

AI Prompt for Deployment:

Set up complete deployment pipeline for Flutter web app:

DEPLOYMENT REQUIREMENTS:

1. Flutter web build optimization
2. Firebase Hosting configuration
3. Custom domain setup
4. PWA configuration
5. Performance optimization
6. SEO optimization for web
7. Analytics integration

BUILD CONFIGURATION:

- Optimize for web performance
- Configure service worker
- Set up caching strategies
- Minimize bundle size
- Configure environment variables

FIREBASE HOSTING:

- Deploy to Firebase Hosting
- Set up custom domain
- Configure SSL certificates
- Set up redirects and rewrites
- Configure security headers

Generate complete deployment configuration with firebase.json, .firebaserc, and build scripts. Include performance monitoring and error tracking setup.

AI Prompts Library {#ai-prompts}

Quick Start Prompts

1. Complete Project Bootstrap:

Create complete Flutter + Firebase project for Grow360 employee performance management:

- Set up all dependencies and configurations
- Implement authentication with role-based access
- Create responsive Material Design 3 UI
- Set up Firestore database with security rules
- Implement basic CRUD operations
- Add real-time data synchronization
- Include error handling and loading states

Generate production-ready code with proper architecture and best practices.

2. Advanced Features Implementation:

Add advanced features to Grow360 Flutter app:

- Real-time analytics dashboard with charts
- Performance review workflow system
- Goal management with progress tracking
- Employee onboarding automation
- Notification system with Firebase messaging
- Offline data synchronization
- Export functionality (PDF/Excel)
- Advanced search and filtering

Generate complete implementation with proper state management and UI/UX.

3. Performance & Optimization:

Optimize Grow360 Flutter app for production:

- Implement lazy loading and pagination
- Add caching strategies for Firestore
- Optimize images and assets
- Set up error tracking and analytics
- Implement proper error boundaries
- Add loading skeletons and animations
- Optimize for SEO and accessibility
- Configure PWA features

Generate optimized code with performance monitoring and user experience improvements.

Feature-Specific Prompts

Dashboard Creation:

Create role-based dashboard for [HR/Manager/Employee] with:

- KPI cards with real-time data
- Interactive charts using `fl_chart`
- Recent activity timeline
- Quick action buttons
- Responsive Material Design 3 layout
- Real-time Firestore data synchronization

Include proper loading states and error handling.

Form Generation:

Create [Employee/Goal/Review] form with `flutter_form_builder`:

- All required fields with validation
- File upload capabilities
- Autocomplete and dropdown fields
- Date/time pickers
- Multi-step form navigation
- Real-time validation feedback
- Save draft functionality

Generate with proper error handling and responsive design.

Data Visualization:

Create [Performance/Goal/Analytics] charts with `fl_chart`:

- Interactive line/bar/pie charts
- Real-time data updates
- Custom styling and animations
- Responsive design for mobile/web
- Export functionality
- Drill-down capabilities

Generate with proper data handling and smooth animations.

Mobile App Generation

AI Prompt for Mobile APK:

Configure Flutter project for mobile app generation:

- Add proper Android configurations
- Set up app icons and splash screens
- Configure permissions and features
- Optimize for mobile performance
- Add mobile-specific UI adaptations
- Set up Firebase for mobile
- Generate signed APK for distribution

Include complete build configuration and deployment instructions.

Success Metrics

What Your Final Demo Will Show:

1.  **Responsive Web App** working across all devices
2.  **Real-time Data Updates** across multiple browser tabs
3.  **Role-based Access Control** with proper authentication
4.  **Interactive Analytics** with live charts and filtering
5.  **Complete CRUD Operations** for all entities
6.  **Mobile-Friendly Design** with touch-optimized UI
7.  **Offline Capabilities** with Firebase caching
8.  **Production Deployment** on Firebase Hosting

Assessment Advantages:

- **Modern Technology Stack** (Flutter + Firebase)
- **Single Codebase** for web and mobile
- **Real-time Features** that impress evaluators
- **Cloud-Native Architecture** showing scalability understanding
- **Professional UI/UX** with Material Design 3
- **Complete Feature Set** meeting all requirements

Next Steps

1. **Start with Project Setup** - Use the bootstrap prompt
2. **Implement Core Features** - Focus on authentication and dashboard first

3. **Add Advanced Features** - Real-time analytics and review system
4. **Optimize and Deploy** - Performance tuning and Firebase hosting
5. **Test and Document** - Comprehensive testing and documentation

Ready to build the most impressive Grow360 implementation! 🌟
